

Introduction to Big Data Sources

- from the perspective of geospatial & social data

Dr. Yuanzheng Shao

Geo-computation Center for Social Sciences, Wuhan University

Outline

1. Background

2. Spatial Big Data

- Remote Sensing Data
- Major Earth Observation Satellites & Data Products
- Chinese Satellites - LuoJia-1

3. Social Big Data

- Mobility Data
- Airline Flight Data
- High-speed Train Data
- Social Media Data

4. CEOS WGISS CWIC

A Brief Introduction About GCSS

Geocomputation Center for Social Sciences (GCSS):

- Established on Jan. 2018
- Hosted by the State Key Lab of Survey and Remote Sensing Information Engineering at Wuhan University.
- Co-sponsored by Wuhan University, the University of Chicago and China Data Institute
- Chair: Jianya Gong
- Co-Chairs: Luc Anselin and Shuming Bao

The Objectives of GCSS

- **Promote research on new theory and methodology**
- **Develop core technology for spatial data analysis and intelligent Information service**
- **Provide an open platform for international collaboration**

Resources for COVID-19 & Global Research

Resources for COVID-19

https://dataverse.harvard.edu/dataverse/cdl_dataverse

This project aims to provide an information infrastructure for the spatial study of the new novel coronavirus (COVID-19), which was first detected in Wuhan City, Hubei Province, China and spread to other parts of China and dozens of countries and regions in the world. The objectives of this project are:

- To provide data support for the spatial study of COVID-19 at local, regional and global levels with information collected and integrated from different sources.
- To facilitate quantitative research on spatial spreading and impacts of COVID-19 with advanced methodology and technology.
- To promote collaborative research on the spatial study of COVID-19 on the China Data Lab, Dataverse and WorldMap platforms.
- To build research capacity for future collaborative projects.

This project is a joint effort by scholars and professionals from the [Center for Geographical Analysis](#) at Harvard University, [the Geo-Computation Center for Social Sciences](#) at Wuhan University, the [China Data Institute](#), and the [RMDS Lab](#). The final data will be deployed to dataverse.harvard.edu for research sharing.

2 Spatial Big Data

2. Introduction - Spatial big data

Spatial Big Data—be this natively geocoded content, geographical metadata, or data that itself refers to spaces and places—has become a pervasive presence in the spaces and practices of everyday life. Beyond preoccupations with “the geotag” and with mapping geocoded social media content, this special theme explores what it means to encounter and experience spatial Big Data *as a quotidian phenomenon that is both spatial, characterized by and enacting of material spatialities, and spatializing*, configuring relations between subjects, objects, and spaces in new and unprecedented ways.

Source: Agnieszka Leszczynski, Jeremy Crampton, “Introduction: Spatial Big Data and everyday life”

Remote Sensing Data

Remote sensing has become one of **the most important methods used to quickly and directly acquire information on the Earth's surface**. In recent years, with development of environmental information science, remote sensing data have played an important role in many research fields, such as atmospheric science, ecology, soil contamination, water pollution, environmental geology, environmental soil science, volcanic phenomena and evolution of the Earth's crust.

Remote sensing data has several concrete and special characteristics: **multi-source, multi-scale, high-dimensional, dynamic-state, isomer, and non-linear characteristics**.

Source: Peng Liu, "A survey of Remote Sensing Data"

According to the Index of Objects Launched into Outer Space maintained by United Nations Office for Outer Space Affairs (UNOOSA), there are currently **5774** satellites currently orbiting the planet.

As of May 2020, there are currently **2666** operational satellites.

Remote Sensing Data Applications

Application - Forestry

1) reconnaissance mapping:

- forest cover type discrimination
- agroforestry mapping

2) Commercial forestry:

- clear cut mapping / regeneration assessment
- burn delineation
- infrastructure mapping / operations support
- forest inventory
- biomass estimation

3) Environmental monitoring

Conservation authorities are concerned with monitoring the quantity, health, and diversity of the Earth's forests.

- deforestation (rainforest, mangrove colonies)
- species inventory
- watershed protection (riparian strips)
- coastal protection (mangrove forests)
- forest health and vigour

Remote Sensing Data Applications

Application - Geology

- surficial deposit / bedrock mapping
- lithological mapping
- structural mapping
- sand and gravel (aggregate) exploration/ exploitation
- mineral exploration
- hydrocarbon exploration
- environmental geology
- geobotany
- baseline infrastructure
- sedimentation mapping and monitoring
- event mapping and monitoring

2. Introduction - Remote Sensing Data

Application - Geology

- surficial deposit / bedrock mapping
- lithological mapping
- structural mapping
- sand and gravel (aggregate) exploration/ exploitation
- mineral exploration
- hydrocarbon exploration
- environmental geology
- geobotany
- baseline infrastructure
- sedimentation mapping and monitoring
- event mapping and monitoring

Remote Sensing Data Applications

Application - Hydrology

- wetlands mapping and monitoring,
- soil moisture estimation,
- snow pack monitoring / delineation of extent,
- measuring snow thickness,
- determining snow-water equivalent,
- river and lake ice monitoring,
- flood mapping and monitoring,
- glacier dynamics monitoring (surges, ablation)
- river /delta change detection
- drainage basin mapping and watershed modelling
- irrigation canal leakage detection
- irrigation scheduling

Remote Sensing Data Applications

Application - Land cover & Land use

- natural resource management
- wildlife habitat protection
- baseline mapping for GIS input
- urban expansion / encroachment
- routing and logistics planning for seismic / exploration / resource extraction activities
- damage delineation (tornadoes, flooding, volcanic, seismic, fire)
- legal boundaries for tax and property evaluation
- target detection - identification of landing strips, roads, clearings, bridges, land/water interface
- interface

Remote Sensing Data Applications

Application - Mapping

- planimetry
- digital elevation models (DEM's)
- baseline thematic mapping /
topographic mapping

Major Earth Observation satellites

- **Landsat**
- **SPOT**
- **Ikonos**
- **AVHRR**
- **Seawifs**
- **GOES**
- **Radarsat**
- **Meteosat**
- **ESA Satellites (ENVISAT)**
- **Japanese Satellites**
- **Terra A-Train**

Major Application Areas

- **Environmental Concerns**
- **Engineering**
- **Agriculture**
- **Forestry And Natural Resources**
- **Geology**
- **Oceanography**
- **Land use, Geography, Urban Planning**
- **Atmospheric Sciences**
- **Hydrology**

LANDSAT DATA

Landsat Data

The longest-running enterprise for acquisition of satellite imagery of Earth.

Swath Width: 185 km

Orbit Altitude: 705 km

Spectral bands : 8

Spatial resolutions : 15 ~ 60 meters

The temporal resolution : 16 days

Equatorial Crossing : at around 10 a.m. local solar time

One Landsat scene : about 115 miles long and 115 miles wide.

Divided into scenes for easy downloading.

Rich band

High resolution

Short repeat cycle

Easy to download & classify

Large map area

EarthExplorer

<https://earthexplorer.usgs.gov/>

Landsat Data Applications

- Agriculture
- Cartography
- Geology
- Forestry
- Regional planning
- Surveillance
- Education
-

Agriculture, Forestry and Range Resources	Land Use and Mapping	Geology	Hydrology	Coastal Resources	Environmental Monitoring
Discriminating vegetative, crop and timber types	Classifying land uses	Mapping major geologic features	Determining water boundaries and surface water areas	Determining patterns and extent of turbidity	Monitoring deforestation
Measuring crop and timber acreage	Cartographic mapping and map updating	Revising geologic maps	Mapping floods and flood plain characteristics	Mapping shoreline changes	Monitoring volcanic flow activity
Precision farming land management	Categorizing land capabilities	Recognizing and classifying certain rock types	Determining area extent of snow and ice coverage	Mapping shoals, reefs and shallow areas	Mapping and monitoring water pollution
Monitoring crop and forest harvests	Monitoring urban growth	Delineating unconsolidated rocks and soils	Measuring changes and extent of glacial features	Mapping and monitoring sea ice in shipping lanes	Determining effects of natural disasters
Determining range readiness, biomass and health	Aiding regional planning	Mapping volcanic surface deposits	Measuring turbidity and sediment patterns	Tracking beach erosion and flooding	Assessing drought impact

SPOT DATA

SPOT Data

SPOT

- A commercial high-resolution optical imaging Earth observation satellite system.
- Run by Spot Image, based in Toulouse, France.
- Initiated by the CNES in the 1970s
- Developed in association with the SSTC and the Swedish National Space Board.

https://www.usgs.gov/centers/eros/science/usgs-eros-archive-commercial-satellites-spot-north-american-data-buy?qt-science_center_objects=0#qt-science_center_objects

SPOT Data Applications

- Agriculture
- Planning, land use and landcover
- Cadastral mapping
- Cartography and topography
- Urban planning
- Forestry
- Natural reserve management and planning
- Natural hazard and pollution monitoring
- Geology, mineral and oil exploration
- Water resources
- Coastal and ocean studies
- Monitoring and surveillance

Ikonos Data

Ikonos Data

IKONOS was a commercial Earth observation satellite, and **was the first to collect publicly available high-resolution imagery at 1- and 4-meter resolution.** It collected multispectral and panchromatic imagery.

The capability to observe Earth via space-based telescope has been called "**one of the most significant developments in the history of the space age**", and IKONOS brought imagery rivaling that of military spy satellites to the commercial market.

IKONOS imagery began being sold on 1 January 2000, and the spacecraft was retired in 2015.

https://www.usgs.gov/centers/eros/science/usgs-eros-archive-commercial-satellites-cdp-imagery-ikonos?qt-science_center_objects=0#qt-science_center_objects

Ikonos Data Applications

Revolutions Around the Earth	14.7, every 24 hours
Altitude	681 kilometers
Resolution at Nadir	0.82 meters panchromatic; 3.28 meters multispectral
Resolution 26° Off-Nadir	1.0 meter panchromatic; 4.0 meters multispectral
Image Swath	11.3 kilometers at nadir; 13.8 kilometers at 26° off-nadir
Dynamic Range	11-bits per pixel
Image Bands	Panchromatic, blue, green, red, near IR

Ikonos satellite provides **panchromatic, natural-color, color-infrared and stereo images**. In particular, this is useful for **cartographic, photogrammetric and various remote sensing applications**.

Its applications include both urban and rural mapping of natural resources and of natural disasters, tax mapping, agriculture and forestry analysis, mining, engineering, construction, and change detection.

AVHRR Data

AVHRR Data

The Advanced Very-High-Resolution Radiometer

A space-borne sensor that measure the reflectance of the Earth in five spectral bands (relatively wide by today's standards.)

A multispectral sensor with six spectral bands.
Includes **red, thermal, mid and near-infrared bands.**
But over time, their spectral ranges have varied.

https://www.usgs.gov/centers/eros/science/usgs-eros-archive-advanced-very-high-resolution-radiometer-avhrr?qt-science_center_objects=0#qt-science_center_objects

AVHRR – spectral bands and specifications

Band	Name	Spectral Range	Applications
Band 1	Red	0.58-0.68	Urban, vegetation, snow/ice, daytime clouds
Band 2	Near IR	0.725-1.00	Vegetation, land/water boundaries, snow/ice, flooding
Band 3A	Mid IR	1.58-1.64	Vegetation, snow/ice detection, dust monitoring
Band 3B	Thermal	3.55-3.93	Surface temperature, wildfire detection, nighttime clouds, volcanic eruptions
Band 4	Thermal	10.30-11.30	Surface temperature, wildfire detection, nighttime clouds, volcanic eruptions
Band 5	Thermal	11.5-12.50	Sea surface temperature, water vapor path radiance

SeaWiFS Data

SeaWiFS Data

SeaWiFS was a satellite-borne sensor designed to collect global ocean biological data. Active from September 1997 to December 2010, its primary mission was to quantify chlorophyll produced by marine phytoplankton.

Swath width : ~2875 km at the equator
Ground resolution : ~1 km / pixel at nadir

The near-IR bands (765 and 865 nm) are used to derive the atmospheric path radiance, which is then subtracted from the total signal to obtain water leaving radiance (L_w) in the visible.

https://oceancolor.gsfc.nasa.gov/forum/oceancolor/topic_show.pl?tid=85

SeaWiFS Data Applications

SeaWiFS' primary application is to **sensing of color variations in the Earth's oceans**. Specifically, the color variations are indicative of phytoplankton content, suspended sediments, and the presence of dissolved organic material (DOM or yellow matter).

The purpose of the SeaWiFS Project is to provide quantitative data on global ocean bio-optical properties to the Earth science community. Subtle changes in ocean color signify various types and quantities of marine phytoplankton (microscopic marine plants), the knowledge of which has both scientific and practical applications.

<https://oceancolor.gsfc.nasa.gov/SeaWiFS/>

GOES Data

GOES Data

The Geostationary Operational Environmental Satellite system (GOES), operated by the United States' National Environmental Satellite, Data, and Information Service (NESDIS), supports weather forecasting, severe storm tracking, and meteorology research. Spacecraft and ground-based elements of the system work together to provide a continuous stream of environmental data

<https://www.star.nesdis.noaa.gov/goes/>

Radarsat Data

Radarsat Data Application

RADARSAT was designed to provide detailed information on sea ice and terrestrial ice sheets for climate research, to produce radar imagery for geographical applications in oceanography, agriculture, forestry, hydrology, and geology, and to provide real-time products for arctic ocean navigation including ice surveillance.

ESA Data

ESA Data - ENVISAT

The European Space Agency (ESA) is Europe's gateway to space. Its mission is to shape the development of Europe's space capability and ensure that investment in space continues to deliver benefits to the citizens of Europe and the world.

Envisat was ESA's successor to ERS.

The largest civilian Earth observation mission.(8 tons)

Envisat had 10 instruments to provide continuous observation and monitoring of Earth's land, atmosphere, oceans and ice caps

<https://www.esa.int/>

ENVISAT Data Applications: Ocean

Ocean	ASAR	GOMOS	RA-2	MERIS	MIPAS	MWR	LR	SCIA	AATSR	DORIS
Ocean Colour				x						
Sea Surface Temperature									x	
Surface Topography			x				x			x
Turbidity				x						
Wave Characteristics	x		x							
Near Surface Wind	x		x							
Current Features	x		x							
Marine Geoid			x							
Global Circulation			x						x	
Ocean Fronts	x			x					(x)	

ALOS Data

ALOS Data

ALOS is one of the largest Earth observing satellites. Its objectives are:

1. to provide maps for Japan and other countries including those in the Asian-Pacific region (Cartography)
2. to perform regional observation for "sustainable development", harmonization between Earth environment and development (Regional Observation),
3. to conduct disaster monitoring around the world (Disaster Monitoring),
4. to survey natural resources (Resources Surveying),
5. to develop technology necessary for future Earth observing satellite (Technology Development)

Observation parameter	ALOS (launch 2006)	ALOS-2 (launch 2014)
Spatial resolution	- Strip map: 10 m - ScanSAR: 100 m	- Strip map: 3 m /6 m /10 m - ScanSAR: 100 m - Spotlight: 1 m x 3 m

NASA A-Train

THE A-TRAIN

NASA and its international partners operate several Earth-observing satellites called the Afternoon Constellation, or the **A-Train**.

NASA A-Train Data

The A-train is a satellite constellation of five Earth observation satellites of varied nationality in sun-synchronous orbit at an altitude of 705 km above the Earth. The orbit, at an inclination of 98.14° , crosses the equator each day at around 1:30 pm solar time, giving the constellation its name and crosses the equator again on the night side of the Earth, at around 1:30 am.

NASA A-Train Data Applications

Satellite	Related Applications
Aqua	Agricultural Efficiency, Air Quality, Carbon Management, Coastal Management, Disaster Management, Ecological Forecasting, Water Management
Aura	Agricultural Efficiency, Air Quality, Public Health
PARASOL	Agricultural Efficiency, Air Quality, Carbon Management, Ecological Forecasting, Energy Management
CALIPSO	Air Quality, Aviation, Homeland Security, Public Health
CloudSat	Aviation, Weather Prediction
GCOM-W1	Agricultural Efficiency, Coastal Management, Disaster Management, Homeland Security, Water Management, Weather Prediction
OCO-2	Air Quality, Carbon Management, Public Health

Chinese Satellite Data

Luojia 1-01

- ❑ Launched on June 2, 2018.
- ❑ A CubeSat (6U) sized satellite built by the Wuhan University.
- ❑ The satellite acts as a prototype for a future 60-80 earth observation satellite constellation.
- ❑ Luojia 1-01 features an imager with 100m ground resolution.
- ❑ 130 meters surface resolution of night light remote sensing data
- ❑ 5900 scenes of effective data have been obtained
- ❑ 230000 scenes of data have been distributed to more than 4000 users for free from more than 20 countries.
- ❑ Used by Beidou and GPS navigation.

Luojia 1-01

High sensitivity luminous camera

High resolution image data

Luojia 1-01

Luojia 1-01 night-time remote sensing image of Los Angeles, USA (June 6, 2018)

S-NPP /VIIRS night-time remote sensing image of Los Angeles, USA

Luojia 1-01 Data Application

Type	Example	Data	Actual accuracy
GDP Analysis	Correlation analysis between China's nighttime lighting and GDP in 2012	NPP_VIIRS	Cor.Coeff (R^2) 0.8702
Population analysis	Spatial analysis of coastal population based on census and multi-source night light data	NPP_VIIRS DMSP_OLS	Cor.Coeff (R^2) 0.785\0.798
Analysis of power consumption	Correlation analysis between night lighting and power consumption in China in 2012	NPP_VIIRS	Cor.Coeff (R^2) 0.8961
Carbon Emission	Correlation analysis between global light distribution and carbon dioxide emissions	DMSP_OLS	Cor.Coeff (R^2) 0.73
Urban Expansion	Urbanization pattern and process in Yangtze River Delta Based on night light data	DMSP_OLS	The extraction error of each city is within 7%, the average error is .52
Urbanization	Analysis of urban change in China based on night light data	DMSP_OLS	Most of the area extraction coincidence > 75%
Poverty	World poverty map based on noctilucant remote sensing data	DMSP_OLS	Cor.Coeff (R^2) 0.7217

Luojia 1-01 Data Application

Syria war impact assessment

The temporal and spatial data clustering technology is used to mine the temporal and spatial change patterns of Syrian luminous.

The clustering results of the two categories show that the luminous patterns are divided by the Syrian border line, and the clustering results of the three categories also reflect similar patterns.

Time series night-time light images

Two-class based class map

Three-class based class map

Two-class based class centers

Three-class based class centers

Luojia 1-01 Data Application

Assessment of unbalanced regional development in China

- Regional unbalanced development has always been the important problems in China's regional economy

A primary school in Beijing, China

A village primary school in Guizhou, China

- The central government of China has strengthened the policy of regional coordinated development

Luoja 1-01 Data Application

Assessment of unbalanced regional development in China

Guizhou province – 2012

Guizhou province – 2016

Luojia 1-01 Data Application

Assessment of unbalanced regional development in China

- According to our analysis, Guizhou, Chongqing, Xinjiang, Hunan, Qinghai, Sichuan, Anhui, Jiangxi and Hubei are the 10 provinces with the fastest growth in lighting. All of these provinces are located in the West or central part of China, and none of them is located in the east of China.
- The above analysis shows that the urban construction and development speed in the West and central China is faster than that in the East, which proves that the regional coordinated development policy has played a role.

Social Big Data: Social Media Data

Social media data

- An advanced Twitter scraping tool written in Python that allows for scraping Tweets from Twitter profiles **without** using Twitter's API.
- Utilize Twitter's search operators to let scrape Tweets from specific users, scrape certain topics, hashtags & trends, or sort out *sensitive* information from Tweets like e-mail and phone numbers.

Limitations: With no geographic information; Delayed dataset updates

Social Big Data: Social Media Data

Social media data

Geo-Tweets from the Center for Geographic Analysis at Harvard

Descriptions: <https://doi.org/10.7910/DVN/3NCMB6>

Geo-tweet Archive Geo-located tweets or "geo-tweets" since late 2012. Approximately 1% of tweet records contain geographic coordinates.

Geo-tweet Records:

- tweet_id (bigint)
- time (timestamp without time zone)
- lat (double precision)
- lon (double precision)
- goog_x (double precision)
- goog_y (double precision)
- sender_id (integer)
- sender_name (character varying(50))
- source (character varying(200))
- reply_to_user_id (integer)
- reply_to_tweet_id (bigint)
- place_id (character varying(40))
- tweet_text (character varying(500))

Social Big Data: Global News Data

Global News data

The GDELT Project monitors the world's broadcast, print, and web news from nearly every country in over 100 languages and identifies people, locations, organizations, themes, sources, emotions, counts, quotes, images, and events. It offers a free open platform for public.
